

# Advanced Care Learning Community

Winter 2019 Focus: Team-based approaches to responding to Substance Use Disorders in Primary Care

## Objectives

- Explore the viability and implementation of new and unique team roles and effective, trauma informed practices for whole person treatment of substance use disorders in primary care
- Learn from specialty behavioral health experts about evidenced based and promising practices for delivering integrated care in either primary care or behavioral settings
- Consider the medical and social determinants of health disparities for people affected by SUD and behavioral health conditions as well as the promise of the Recovery Oriented System of Care for improving population health
